CASE STUDY

Payroll Automation

For A Mid-Size Accounting and Tax Organization

The Challenge:

Client is engaged in Accounting and Taxation service which including Payroll services as well. On periodic basis client has to generate several payrolls per payroll cycle for their multiple clients, which was manual laborious work but repetitive in terms of business process. Due to volume of data overall process used to take long time to process and was prone to manual errors.

Luceats Approach:

- Client uses **Citrix** based solution, cognitive automation approach was taken
- Multi-threaded execution for reading source data and processing in the **DRAKE hosted** application was followed.
- Various Data validation steps are imposed before, during and post execution
- Source data files were standardized and analytical reports were bundled-in

Benefits: Improved Efficiency, Consistency and Quality

- Overall process efficiency improved by 800%
- **One Touch** pay-roll preparation goal was achieved
- **99%+** Repetitive Accuracy achieved
- **99%** Regulatory compliance attained
- The RPA solution delivers numerous benefits, including faster processing with greater consistency and fewer errors. Modular design enable client to process payroll and different payroll taxes (Federal, State, Local) to be executed separately.
